GENOMICS

International Journal of Gene Mapping and Nucleotide Sequencing
Emphasizing Analyses of the Human and Other Complex Genomes

Editors-in-Chief

Victor A. McKusick
The Johns Hopkins University, Baltimore, Maryland
Frank H. Ruddle
Yale University, New Haven, Connecticut

Genomics highlights the emergence of a new area of scientific inquiry—the comparative analysis of the hierarchical organization and evolution of the human and other complex genomes.

- Provides a common meeting ground for those involved in molecular biology and genetics
- Emphasizes the integration of basic and applied research in human and comparative gene mapping, molecular cloning, large-scale restriction mapping, and DNA sequencing and computational analysis
- Publishes full-length and brief research communications, timely reviews, and editorial commentary
- Promotes efficient communication with the major genetic databases

Volumes 4–5 (1989), 8 issues
ISSN 0888-7543
In the U.S.A. and Canada: $168.00
All other countries: $189.00

Sample copies and privileged personal rates are available upon request.

Keeping You Informed Of The Latest Advances

ADVANCES IN GENETICS
Volumes 24 and 25

edited by
E.W. Caspari and John G. Scandalios

From the Reviews of Previous Volumes:
"Outstanding in both the variety and the quality of its contributions."
—NATURE

Volume 25

CONTENTS: *D.S. Grosch,* Genetics Research on Braconid Wasps: 1961–1984. *K. Wolf and G. Del Giudice,* The Variable Mitochondrial Genome of Ascomycetes: Organization, Mutational Alterations, and Expression. *G.K. Chambers,* The *Drosophila* Alcohol Dehydrogenase Gene–Enzyme System. *B.H. Bowman, F. Yang, and G.S. Adrian,* Transferrin: Evolution and Genetic Regulation of Expression. Each chapter includes references.

1988, 308 pages, $55.00
ISBN: 0-12-017625-4

Volume 24
Molecular Genetics of Development

edited by
John G. Scandalios

CONTENTS: *U. Bond and M.J. Schlesinger,* Heat–Shock Proteins and Development. *M. Bienz and H.R.B. Pelham,* Mechanisms of Heat–Shock Gene Activation in Higher Eukaryotes. *J.M. Chandlee and J.G. Scandalios,* Regulatory Gene Action during Eukaryotic Development. *T.R.F. Wright,* The Genetics of Biogenic Amine Metabolism, Sclerotization, and Melanization in *Drosophila melanogaster. F.C. Kafatos, N. Spoerel, S.A. Mitsialis, H.T. Nguyen, C. Romano, J.R. Lingappa, B.D. Mariani, G.C. Rodakis, R. Lecanidou, and S.G. Tsitilou,* Developmental Control and Evolution in the Chorion Gene Families of Insects. *A. Danchin,* The Significance of Split Genes to Developmental Genetics. *G. Scangos and C. Bieberich,* Gene Transfer into Mice. *H. Bernstein, F.A. Hopf, and R.E. Michod,* The Molecular Basis of the Evolution of Sex. *J.C. Lucchesi and J.E. Manning,* Gene Dosage Compensation in *Drosophila melanogaster. F. Morrish, V. Vasil, and I.K. Vasil,* Developmental Morphogenesis and Genetic Manipulation in Tissue and Cell Cultures of the Gramineae. Each chapter includes references.

1987, 529 pages, $69.00
ISBN: 0-12-017624-6

GENETIC ENGINEERING
Volume 7

edited by
Peter Rigby

From the Reviews of Previous Volumes:
"... well written and certainly worth reading .... the series should quickly build into a useful reference work on recombinant DNA technology."
—NATURE

Valuable not only to experts but also to students and scientists in other fields who want to know more about recombinant DNA technology, this paperback series keeps pace with new developments, techniques, and applications of molecular biology in the life sciences. Volume 7 contains two articles on aspects of molecular parasitology and one review on gene expression in animal cells of biotechnological interest.

CONTENTS: *C.E. Clayton,* The Molecular Biology of the *Kinetoplastidae. J.G. Scaife,* The Cloning of Antigen Genes from Malarial Parasites and *Leishmania* species. *M.M. Bendig,* The Production of Foreign Proteins in Mammalian Cells.

In Paperback: $29.50
ISBN: 0-12-270307-3
1988, 136 pages

FORTHCOMING...

These new companion volumes from the highly acclaimed **Cell Biology** Series, discuss current concepts and future research trends involving the cell and molecular biology of fertilization. Together these two works collate information from leading laboratories where various aspects of fertilization processes are studied. A diversity of animal models is considered, ranging from invertebrates through mammals, including humans.

THE CELL BIOLOGY OF FERTILIZATION

edited by
Heide Schatten and Gerald Schatten

Major topics:
- Sperm behavior and motility
- Remodeling of egg architecture
- Ionic regulation and its controls

December 1988, c. 384 pages
$70.00 (tentative)
ISBN: 0-12-622590-7

THE MOLECULAR BIOLOGY OF FERTILIZATION

edited by
Heide Schatten and Gerald Schatten

Major topics:
- Molecules involved in sperm–egg recognition and binding
- Pronuclear formation and cytoskeletal events resulting in syngamy and cell cycle progression
- Oncogenes, gene activation, and nuclear determination at fertilization and during embryogenesis

December 1988, c. 384 pages
$70.00 (tentative)
ISBN: 0-12-622595-8
